We needed to find a specialist machine that would provide a more cost effective solution for stand clearance and when we saw the Multihog in action we realised that we had found the answer.

Steve Webb, Head of Motor Transport, Bristol Airport
Winter Services

Multihog’s wide range of winter service attachments make light work of even the most adverse weather conditions. The front mounted snow plough, blower or combi snow plough & sweeper attachments together with rear mounted spreader and sprayers can be combined to best suit prevailing conditions.
Winter Services

The Multihog’s flexibility allows us to react very quickly to prevailing conditions for total control of operations at all times. My impression when I first saw the Multihog was that it was a machine worth snapping up, and this has proved to be 100% the case.

Alex Young, Chief Operating Officer, Transroute, Tunnel Operations
Like every other local authority in the UK we had a huge problem with potholes due to the recent extreme winters. The Multihog is at least four times more productive than previous methods and has enabled us to considerably speed up our programme of permanent patching repairs.

David Russell, Road Operations Manager, Glasgow City Council

The Multihog patch planer offers faster, cleaner and quieter planing compared to other machines on the market. Road surfaces can be planed to a width of 400mm and a depth of 125mm, saving on the costs of infill materials by accurately removing only what is necessary.
Multihog is setting new standards across a wide range of sectors when it comes to cost effective, productive and safer operations. Ongoing development of new attachments continues to increase the scope of applications for this versatile, manoeuvrable and robust piece of equipment.
