

The LG Alert™ Rollover Warning System is suitable for use on any non-articulated vehicle and is particularly beneficial where the vehicle is subjected to high cornering speeds, uneven terrain, dynamic loads or by design has a high center of gravity. The MADASS™ device is an add-on unit that may be used for data acquisition, vehicle monitoring and incident re-creation purposes.

- Rollover warning device and driver training aid.
- Provides audible and visual alarms.
- Adjustable sensitivity.
- Can be installed in under 1 hour.
- Proven technology.
- Can help maintain operational readiness, and reduce injuries and medical costs caused by preventable rollovers.
