SMART-TRAILER ST-1100 Trailer De-Icer

The ST-1100 Trailer Deicer is designed with the end user in mind. The simple to operate Spray Mate II and Variable orifice Nozzles makes this an easy choice for efficient and important Runway operations. The ST-1100 is a completely self-contained Runway De-Icer.

The Trailer De-Icer is completely self contained. Equipped with a 3" product pump driven by a 13 HP Honda engine. On load and off load are standard. The Trailer De-Icer comes standard with a 1000-gallon (3785-Litre) poly tank. The 50-foot (15-m) manual fold booms are equipped with an inboard clutch device designed to breakaway if the booms happen to strike a foreign object.

Nozzle Valves may be used independently or combined using switches for left, right or center nozzles as desired.

The Trailer frame is constructed of tubular steel with powder coat finish for durability. Equipped with Torq-flex axles electric brakes and 16" 10 ply tires. The three-section spray boom provides spray widths from 8' to 50' (2.4 to 15 m). When the booms are in the transport position, center section spraying is ideal for treating single lane roadways, parking areas and pedestrian walkways.
